

ABSTRACT OF THE DISCLOSURE

- A cradle for a film, coating, or sealing rod has a profile (10) that includes a base part (11), a rod groove (16), and a body part (14) between them. The rod groove (16) is arranged to receive the rod (12) between lips (20, 20') edging the rod groove (16).
- 5 The circumference lying against the rod (12) is formed at least partly of a slider piece (22), which is an insert-molded part of the profile (10), and which is of a material other than the material of the base part (11) and the body part (14).
